PEACEMAKER™ INFLOW PROTECTOR MANHOLE INSERTS

Technology designed for the control of hydrogen sulfide, mercaptans and other malodorous compounds found in sewer gases.

With sewage treatment costs rising, and many other city systems strained to the breaking point, officials are taking a closer look at streamlining existing plant operations and sewer systems.

One of the ways they are doing this is to eliminate rainwater from the sanitary sewer system by using patented Inflow Protector™ Manhole Inserts.

During rainy weather, an average manhole contributes from 3,000 to 12,000 gallons of rainwater per day to your treatment system. Keeping that kind of volume out will save you money.

Features

- Easy installation by one person
- Sturdy, shock-resistant ABS construction
- Sewer gas is vented through valve at 1 p.s.i. or less
- Maximum of 10 gallons drip through valve in 24 hours
- Lift strap provided for easy removal

Benefits

- Stop inflow of rainwater into sewage systems
- Reduce manhole rattling and flipping due to street traffic
- Stop dirt and debris from entering collection system through manhole cover
- One-year warranty against defects in material and workmanship

Limited Warranty:

Our only obligation shall be to replace or pay for any material proved defective. Beyond the purchase price of materials supplied by us, we assume no liability for damages of any kind and the user accepts the product "as is" and without warranties, expressed or implied. The suitability of the product for an intended use shall be solely up to the user.
